

Year: 5/6		Subject: Science		Topic Question: <i>How and why do we never run out of plants?</i>		Term - Autumn 1		Curriculum - B		
Prior Knowledge - Notice that animals, including humans, have offspring which grow into adults. (Y2 - Animals, including humans) - Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal. (Y3 - Plants)						Key Vocabulary Life cycle, reproduce, sexual, sperm, fertilises, egg, live young, metamorphosis, asexual, plantlets, runners, bulbs, cuttings			Outcome Information booklet	
Future Learning - Reproduction in humans (as an example of a mammal), including the structure and function of the male and female reproductive systems, menstrual cycle (without details of hormones), gametes, fertilisation, gestation and birth, to include the effect of maternal lifestyle on the foetus through the placenta. (KS3) - Reproduction in plants, including flower structure, wind and insect pollination, fertilisation, seed and fruit formation and dispersal, including quantitative investigation of some dispersal mechanisms. (KS3)						Stimulus Film clips First hand experiences (enrichment) Images of rainforest plants			World of Work School nurse, doctors, nurses, scientists	
National Curriculum PoS - describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird - describe the life process of reproduction in some plants and animals. Working Scientifically - planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary - taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate - recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs - using test results to make predictions to set up further comparative and fair tests - reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations - identifying scientific evidence that has been used to support or refute ideas or arguments		Key Knowledge As part of their life cycle, plants and animals reproduce. Most animals reproduce sexually. This involves two parents where the sperm from the male fertilises the female egg. Animals, including humans, have offspring which grow into adults. In humans and some animals, these offspring will be born live, such as babies or kittens, and then grow into adults. In other animals, such as chickens or snakes, there may be eggs laid that hatch to young which then grow to adults. Some young undergo a further change before becoming adults e.g. caterpillars to butterflies. This is called a metamorphosis. Plants reproduce both sexually and asexually. Bulbs, tubers, runners and plantlets are examples of asexual plant reproduction which involves only one parent. Gardeners may force plants to reproduce asexually by taking cuttings. Sexual reproduction occurs through pollination, usually involving wind or insects.				Possible evidence - Can draw the life cycle of a range of animals identifying similarities and differences between the life cycles - Can explain the difference between sexual and asexual reproduction and give examples of how plants reproduce in both ways				
		Application of Key Skills				Possible evidence				
		- Use secondary sources and, where possible, first-hand observations to find out about the life cycle of a range of animals. - Compare the gestation times for mammals and look for patterns e.g. in relation to size of animal or length of dependency after birth. - Look for patterns between the size of an animal and its expected life span. - Grow and observe plants that reproduce asexually e.g. strawberries, spider plants, potatoes. - Take cuttings from a range of plants e.g. African violet, mint. - Plant bulbs and then harvest to see how they multiply. - Use secondary sources to find out about pollination.				- Can present their understanding of the life cycle of a range of animals in different ways e.g. drama, pictorially, chronological reports, creating a game - Can identify patterns in life cycles - Can compare two or more animal life cycles they have studied - Can explain how a range of plants reproduce asexually				

Year: 5/6 Subject: Science PoS: Animals including humans Y5		Topic Question: <i>Do we change as we age?</i>	Term - Autumn 2	Curriculum - B 
Prior Knowledge Notice that animals, including humans, have offspring which grow into adults. (Y2 - Animals, including humans)		Key Vocabulary Puberty – the vocabulary to describe sexual characteristics	Outcome Draw the life cycle of a range of animals identifying similarities and differences between the life cycles	
Future Learning Reproduction in humans (as an example of a mammal), including the structure and function of the male and female reproductive systems, menstrual cycle (without details of hormones), gametes, fertilisation, gestation and birth, to include the effect of maternal lifestyle on the foetus through the placenta. (KS3)		Stimulus Class discussion leading to an informal display	World of Work School Nurse Doctors Nurses Scientists	
National Curriculum PoS - describe the changes as humans develop to old age. Working Scientifically - planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary - taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate - recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs - using test results to make predictions to set up further comparative and fair tests - reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations - identifying scientific evidence that has been used to support or refute ideas or arguments	Key Knowledge When babies are young, they grow rapidly. They are very dependent on their parents. As they develop, they learn many skills. At puberty, a child's body changes and develops primary and secondary sexual characteristics. This enables the adult to reproduce. This needs to be taught alongside PSHE.		Possible evidence - Can explain the changes that takes place in boys and girls during puberty - Can explain how a baby changes physically as it grows, and also what it is able to do	
	Application of Key Skills		Possible evidence	
	This unit is likely to be taught through direct instruction due to its sensitive nature, although children can carry out a research enquiry by asking an expert e.g. school nurse to provide answers to questions that have been filtered by the teacher.		Can present information about the changes occurring during puberty as an information leaflet for other Y5 children or answers to 'problem page questions'	

Year: 5/6 Subject: Science		Topic Question: <i>What affects the movement of objects?</i>	Term - Spring 1	Curriculum - B
PoS: Forces Y5				
Prior Knowledge - Compare how things move on different surfaces. (Y3 - Forces and magnets) - Notice that some forces need contact between two objects, but magnetic forces can act at a distance. (Y3 - Forces and magnets) - Observe how magnets attract or repel each other and attract some materials and not others. (Y3 - Forces and magnets) - Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. (Y3 - Forces and magnets) - Describe magnets as having two poles. (Y3 - Forces and magnets) - Predict whether two magnets will attract or repel each other, depending on which poles are facing. (Y3 - Forces and magnets)		Key Vocabulary Force, gravity, Earth, air resistance, water resistance, friction, mechanisms, simple machines, levers, pulleys, gears	Outcome Dragon's Den presentation	
Future Learning - Forces as pushes or pulls, arising from the interaction between two objects. (KS3) - Using force arrows in diagrams, adding forces in one dimension, balanced and unbalanced forces. (KS3) - Moment as the turning effect of a force. (KS3) - Forces: associated with deforming objects; stretching and squashing – springs; with rubbing and friction between surfaces, with pushing things out of the way; resistance to motion of air and water. (KS3) - Forces measured in Newtons, measurements of stretch or compression as force is changed. (KS3)		Stimulus Moon landing – hammer and feather video clip	World of Work Engineers, Astronaut, Race car drivers	
National Curriculum PoS - Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object. - Identify the effects of air resistance, water resistance and friction that act between moving surfaces. - Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect Working Scientifically - planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary - taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate - recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs - using test results to make predictions to set up further comparative and fair tests - reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations - identifying scientific evidence that has been used to support or refute ideas or arguments	Key Knowledge		Possible evidence	
	A force causes an object to start moving, stop moving, speed up, slow down or change direction. Gravity is a force that acts at a distance. Everything is pulled to the Earth by gravity. This causes unsupported objects to fall. Air resistance, water resistance and friction are contact forces that act between moving surfaces. The object may be moving through the air or water, or the air and water may be moving over a stationary object. A mechanism is a device that allows a small force to be increased to a larger force. The pay back is that it requires a greater movement. The small force moves a long distance and the resulting large force moves a small distance, e.g. a crowbar or bottle top remover. Pulleys, levers and gears are all mechanisms, also known as simple machines.		- Can demonstrate the effect of gravity acting on an unsupported object - Can give examples of friction, water resistance and air resistance - Can give examples of when it is beneficial to have high or low friction, water resistance and air resistance - Can demonstrate how pulleys, levers and gears work	
	Application of Key Skills		Possible evidence	
	- Investigate the effect of friction in a range of contexts e.g. trainers, bathmats, mats for a helter-skelter. - Investigate the effects of water resistance in a range of contexts e.g. dropping shapes through water and pulling shapes, such as boats, along the surface of water. - Investigate the effects of air resistance in a range of contexts e.g. parachutes, spinners, sails on boats. - Explore how levers, pulleys and gears work. - Make a product that involves a lever, pulley or gear. - Create a timer that uses gravity to move a ball. - Research how the work of scientists such as Galileo Galilei and Isaac Newton helped to develop the theory of gravitation.		- Can explain the results of their investigations in terms of the force, showing a good understanding that as the object tries to move through the water or air or across the surface the particles in the water, air or on the surface slow it down - Can demonstrate clearly the effects of using levers, pulleys and gears	

Year: 5/6 Subject: Science PoS: Properties and changes of materials Y5	Topic Question: <i>How do we know which material is best suited for a purpose?</i>		Term - Spring 2 Curriculum - B 
Prior Knowledge - Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. (Y3 - Forces and magnets) - Compare and group materials together, according to whether they are solids, liquids or gases. (Y4 - States of matter) - Observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C). (Y4 - States of matter) - Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature. (Y4 - States of matter)	Key Vocabulary Thermal/electrical insulator/conductor, change of state, mixture, dissolve, solution, soluble, insoluble, filter, sieve, reversible/non-reversible change, burning, rusting, new material	Outcome Explanation using evidence collected	
Future Learning - Chemical reactions as the rearrangement of atoms. (KS3) - Representing chemical reactions using formulae and using equations. (KS3) - Combustion, thermal decomposition, oxidation and displacement reactions. (KS3) - Defining acids and alkalis in terms of neutralisation reactions. (KS3) - The pH scale for measuring acidity/alkalinity; and indicators. (KS3)	Stimulus Odd One Out	World of Work Designer, engineer	
National Curriculum PoS - Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. - Know that some materials will dissolve in liquid to form a solution and describe how to recover a substance from a solution. - Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating. - Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic. - Demonstrate that dissolving, mixing and changes of state are reversible changes. - Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda Working Scientifically - planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary - taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate - recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs - using test results to make predictions to set up further comparative and fair tests - reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations - identifying scientific evidence that has been used to support or refute ideas or arguments	Key Knowledge	Possible evidence	
	Materials have different uses depending on their properties and state (liquid, solid, gas). Properties include hardness, transparency, electrical and thermal conductivity and attraction to magnets. Some materials will dissolve in a liquid and form a solution while others are insoluble and form sediment. Mixtures can be separated by filtering, sieving and evaporation. Some changes to materials such as dissolving, mixing and changes of state are reversible, but some changes such as burning wood, rusting and mixing vinegar with bicarbonate of soda result in the formation of new materials and these are not reversible.	- Can use understanding of properties to explain everyday uses of materials, for example, how bricks, wood, glass and metals are used in buildings - Can explain what dissolving means, giving examples - Can name equipment used for filtering and sieving - Can use knowledge of liquids, gases and solids to suggest how materials can be recovered from solutions or mixtures by evaporation, filtering or sieving - Can describe some simple reversible and non-reversible Key vocabulary changes to materials, giving examples	
	Application of Key Skills	Possible evidence	
	- Investigate the properties of different materials in order to recommend materials for particular functions depending on these properties e.g. test waterproofness and thermal insulation to identify a suitable fabric for a coat. - Explore adding a range of solids to water and other liquids e.g. cooking oil, as appropriate. - Investigate rates of dissolving by carrying out comparative and fair test. - Separate mixtures by sieving, filtering and evaporation, choosing the most suitable method and equipment for each mixture. - Explore a range of non-reversible changes e.g. rusting, adding fizzy tablets to water, burning. - Carry out comparative and fair tests involving non-reversible changes e.g. What affects the rate of rusting? What affects the amount of gas produced? - Research new materials produced by chemists e.g. Spencer Silver (glue of sticky notes) and Ruth Benerito (wrinkle free cotton).	- Can create a chart or table grouping/comparing everyday materials by different properties - Can use test evidence gathered about different properties to suggest an appropriate material for a particular purpose - Can group solids based on their observations when mixing them with water - Can give reasons for choice of equipment and methods to separate a given solution or mixture such as salt or sand in water - Can explain the results from their investigations	

Year: 5/6 Subject: Science		Topic Question: <i>How do we see?</i>	Term - Summer 1/2	Curriculum - B
PoS: Light Y6				
Prior Knowledge - Recognise that they need light in order to see things and that dark is the absence of light. (Y3 – Light) - Notice that light is reflected from surfaces. (Y3 - Light) - Recognise that light from the sun can be dangerous and that there are ways to protect their eyes. (Y3 - Light) - Recognise that shadows are formed when the light from a light source is blocked by an opaque object. (Y3 - Light) - Find patterns in the way that the size of shadows change. (Y3 - Light) - Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. (Y5 - Properties and changes of materials)		Key Vocabulary straight lines, light rays	Outcome Annotated drawings	
Future Learning - The similarities and differences between light waves and waves in matter. (KS3) - Light waves travelling through a vacuum; speed of light. (KS3) - The transmission of light through materials: absorption, diffuse scattering and specular reflection at a surface. (KS3) - Use of ray model to explain imaging in mirrors, the pinhole camera, the refraction of light and action of convex lens in focusing (qualitative); the human eye. (KS3) - Light transferring energy from source to absorber leading to chemical and electrical effects; photo-sensitive material in the retina and in cameras. (KS3) - Colours and the different frequencies of light, white light and prisms (qualitative only); differential colour effects in absorption and diffuse reflection. (KS3)		Stimulus A short film clip	World of Work Ophthalmologist, optician	
National Curriculum PoS - Recognise that light appears to travel in straight lines. - Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. - Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes. - Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.		Key Knowledge Light appears to travel in straight lines, and we see objects when light from them goes into our eyes. The light may come directly from light sources, but for other objects some light must be reflected from the object into our eyes for the object to be seen. Objects that block light (are not fully transparent) will cause shadows. Because light travels in straight lines the shape of the shadow will be the same as the outline shape of the object.	Possible evidence - Can describe, with diagrams or models as appropriate, how light travels in straight lines either from sources or reflected from other objects into our eyes - Can describe, with diagrams or models as appropriate, how light travels in straight lines past translucent or opaque objects to form a shadow of the same shape	
Working Scientifically - planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary - taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate - recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs - using test results to make predictions to set up further comparative and fair tests - reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations - identifying scientific evidence that has been used to support or refute ideas or arguments		Application of Key Skills - Explore different ways to demonstrate that light travels in straight lines e.g. shining a torch down a bent and straight hose pipe, shining a torch through different shaped holes in card. - Explore the uses of the behaviour of light, reflection and shadows, such as in periscope design, rear view mirrors and shadow puppets.	Possible evidence - Can explain how evidence from enquiries shows that light travels in straight lines - Can predict and explain, with diagrams or models as appropriate, how the path of light rays can be directed by reflection to be seen, e.g. the reflection in car rear view mirrors or in a periscope - Can predict and explain, with diagrams or models as appropriate, how the shape of shadows can be varied
